Public Housing Application and Waitlist System

Purpose: It exists to shorten the overall wait time of getting housing, along with the waitlist itself. It is designed to be more accessible for the users so they understand how to enroll and what that entails.

Problem Statement: We are solving the waitlist in universities for their housing. It is for the students. This problem matters because students do not have abundant access to university housing. It is highly competitive and many students are turned away and forced to live in more inconvenient housing.

Project Objectives:

1. Reduce time required to complete university application for housing by provided streamlined online application process that allows students to submit all housing information in one system
2. Improve student's understanding of housing application and the waitlist process by providing clear instructions, requirements, application status information and having a FRQ page for students with additional questions.
3. Students will have real time access to their housing application and waitlist status they know where they stand (denied, waitlist, accepted etc.)
4. Due to the site being more user friendly, the accessibility of the portal will increase. This will be mainly because it can be entered through all devices.
5. Reducing administrative workload and errors by organizing all student applications and waitlist information. Staff will be able to easily update student statuses from one application.

Scope

In Scope

- Applicant login and registration portal
- Housing application submission
- Staff dashboard
- Searching / sorting through applicants / waitlists
- Status tracking (denied, waitlist, accepted)
- Eligibility determination
- Housing unit assignment
- Waitlist placement and position tracking
- FAQ/Help page for common questions
- Design that works on laptop, iphone, android, and tablet
- Centralized storage of housing applications, application information, waitlist information, and housing assignments

Out of Scope

- Property maintenance and repair
- Legal and financial advice

- Processing rent / payments
- Handling emergency housing situations
- Performing background checks
- Roommate conflict resolution
- Meal plan management
- Scholarship management
- Physical room access
- Complete university enrollment process
- Predicting when a student will get placed in housing
- Automatically making housing decisions without staff oversight
